Final Project—Online Shopping System

This project provides an integrated solution for the sales company to check the suppliers and related product quantity and sells products to customers. What's more, the sales company can see the most valuable product based on calculating the detailed profit. The cost of product original price would be taken into consideration. Facing the fierce competition in the trade market, this empowers businessman to make a wiser decision and handle the business matters with high proficiency.

There are three roles being involved: supplier, sales company, and customer. **Suppliers** can provide with kinds of products and the interface which enables sales company to select and order items; **Sales company** has its warehouse to store the products bought from suppliers, sell the products abroad and analyze revenues. **Customer** can buy from sales company.

Based on product price from suppliers, sales company will calculate revenue for each order from customers and get the total revenue.
